

At HASA, Environment Matters.

HASA Sustainability

HASA is committed to advancing an **eco-friendly platform** across our product development, supply chain & shipping protocols.

Better for You, Better for the Environment

HASA's Sani-Clor® 4x1 returnable and reusable gallon deposit cases offer a reliable, "green" transport system to carry our liquid sodium hypochlorite product. Our signature yellow containers are known throughout the pool industry and give our valued pool professionals, dealers & distributors a convenient, efficient way to move HASA product.

Our 4x1 deposit cases keep **more than 25,000,000 plastic bottles out of oceans and landfills every year.**

Safer Materials Handling

- HASA sodium hypochlorite is safer to transport than trichlor or cal hypo tablets that can be flammable & require more caution to store and transport.
- When following appropriate guidelines, HASA's easy-to-carry bottles and containers guard against leakage and spills—safer for you & our communities.
- HASA's automated Daily Feeding System also regularly dispenses our Sani-Clor® and Hasachlor® products into pools—lowering the risk of product waste around children, pets & backyard surfaces.

HASA's sodium hypochlorite drum and tote deposit program also provides sustainable options for our **commercial pool operators and partners.**

HASA: Clearly Better® for our planet for over 50 years.

As the industry standard for liquid chlorine treatment for recreational and industrial water, HASA's Sani-Clor®, Hasachlor® and Multi-Chlor® sodium hypochlorite products have set the bar for reliability and sustainability since 1964.

SALT2SALT
Hasa

- After they're done cleaning recreational water systems, HASA products return to salt—and are safe for oceans and communities.
- Liquid sodium hypochlorite has been a trusted sanitizer for more than a century and a preferred method for maintaining swimming pools and recreational water for six decades.
- Fewer chemical byproducts left in the pool water and eventual wastewater.

Keeping your Water safe
and clean since 1964
