

LEARN MORE

Did you know? **Not all water treatment solutions are created equal!**

Choose Liquid Chlorine over tablets for the most beautiful, sparkling blue pool.

Trichlor tabs are in short supply, but they're also highly acidic and contain cyanuric acid (CYA). **Gallons to pounds, HASA Sani-Clor® provides more free available chlorine.**

1 gallon of HASA Sani-Clor® = 12.5 ppm in 10,000 gallons.

1 lb. of 90% trichlor = 11 ppm in 10,000 gallons.

Why use Liquid Sodium Hypochlorite?

- More effective swimming pool sanitization
- Affordable and easy to use
- Safe storage and transport
- Doesn't contain CYA
- Leaves a measurable residual of free chlorine
- Ideal for use with HASA Liquid Feeder™
- Great for shocking saltwater generator pools
- Best cost per use

Downsides of Trichlor Tablets

- Increased CYA leads to reduced chlorine effectiveness
- Requires more hypochlorous acid (HOCl) to inactivate bacteria and algae
- Higher cost per use
- Increased chemical byproducts & fillers
- Lower pH and total alkalinity may lead to increased use of soda ash and sodium bicarbonate
- Contributes to more frequent pool draining (and costly refills) to lower high CYA

Liquid Sanitizer is a More Sustainable Solution.

HASA's signature Sani-Clor® yellow 4x1 gallon deposit cases are returnable and reusable—keeping **25,000,000 plastic bottles out of oceans & landfills** each year.

 **Reduce. Reuse. Recycle.**

Discover the benefits of **Sani-Clor® liquid sanitizer** for your pool service business

Use HASA Sani-Clor® for shock and daily sanitizer!

- ✓ Saves time and money
- ✓ Streamlines your business
- ✓ Achieves brilliant blue pool "sparkle"
- ✓ Decreased chemical byproduct
- ✓ Safer swimming with less toxicity
- ✓ No cardboard or plastic containers to dispose of
